

## Better Solutions to Reduce Skylight Heat Gain

### Why do we have skylights?

#### Positives:

- ❖ Natural light
- ❖ Better living and working environment
- ❖ May allow for ventilation

#### Negatives:

- ❖ Heat gain drives up cooling cost
- ❖ Light glare effects visibility
- ❖ Most skylight material is of very low energy efficiency - residential skylight lenses are especially inefficient

### Why do you need Arizona Sky Shades™?

- ❖ Reduces heat gain, resulting in better comfort
- ❖ Reduces light glare, creating better visible light
- ❖ Protects skylights - incredibly strong and durable
- ❖ Attractive look (many colors available)
- ❖ Keeps skylight lens up to 40 degrees cooler - holds fabric off lens for maximum effectiveness and free air flow
- ❖ Simple, light-weight construction
- ❖ Easy installation and seasonal removal
- ❖ Does not damage skylight or void manufacturer's warranty

Arizona Sky Shades™ are so unique and effective that we have been granted a U.S. Patent (#9,194,128). We have collected positive testing data over the past 5 years at the SW Building Science Training Center in Phoenix. We have been a Trade Ally with both APS and SRP in their respective building performance programs. The effectiveness of our shades has been recognized by Solar Industries in Tucson.

### Solving the problem of heat gain...

At Arizona Sky Shades,™ we've seen people try some creative ways to reduce the heat gain and glare they experience with their skylights. Here are a handful of solutions that often, if not always, have negative results:

- ❖ Plastic bags - drastically reduces light; heat gathers and causes skylight to crack
- ❖ Wood framed boxes with shade cloth - blocks out light; heavy wood frame
- ❖ Blankets or fabric on inside - blocks out light; does not reduce heat gain
- ❖ Shade cloth held in place with bungee cord - ineffective and raises skylight lens temperature to damaging levels

### Why make do with shoddy solutions that don't address the problem effectively!

### Why is this of value to the homeowner?

- ❖ Reduces heat gain and damaging UV rays
- ❖ Saves on cooling expenses
- ❖ Reduces unwanted glare
- ❖ Will not void skylight warranties
- ❖ Can be easily removed for wintertime solar heat gain or skylight maintenance
- ❖ Adds protection to skylight from storm debris, hail, golf balls, etc.
- ❖ 5-year warranty
